### 1 INTRODUCTION

Users forgetting their passwords is a common headache for IT departments. AD Self Password Reset allows your users to safely reset their own password without calling the IT helpdesk.

AD Self Password Reset includes a number of ways to help reduce the pain of forgotten passwords and locked out users.

Password Expiry Reminder emails prompt users to change their password before it expires which can help to reduce the number of locked out users.

Should users forget their password Users can reset it by answering a number of questions or receiving a reset code via SMS message to their mobile.

We've added a number of other useful features, one such feature is 'Helpdesk'. This allows the 'Helpdesk Group' to reset the passwords of the 'Managed Users Group'. An ideal scenario for this is teachers being given the ability to reset their students' passwords right there in the classroom, no need to call the helpdesk.

Thanks to your feedback we're improving AD Self Password Reset all the time, please keep your feedback coming.

#### 1.1 Installation

Step 1 Double click the ADSelfPasswordResetSetup Installer

Step 2 Begin the installation. Click Next >

Step 3 Select the website where you want to install AD Self Password Reset, the Application will be installed in a sub-folder of the web site (e.g. C:\intepub\wwwroot\PasswordReset). Then select an Application Pool for the program to use or type the name PasswordReset. Click Next.

₿	AD Self Password Reset Setup

Step 4 At the end of the installation wizard choose 'Launch AD Self Password Reset Configuration' to run the Configuration exe.

Co Pa	mpleting the AD Self ssword Reset Setup Wizard	
Click	the Finish button to exit the Setup Wizard.	
	aunch AD Self Password Reset Configuration	
	< Back Finish Cancel	1

Step 5 Finally click Finish

#### 1.2 Removal

To remove the program, follow the steps below.

Step 1 Go to Add/Remove Programs (Settings > Control Panel)

Step 2 In the list of currently installed programs locate AD Self Password Reset

Step 3 Click the Remove button on the right.

# **1.3** Initial Configuration

Before the application can be used it needs to be configured. To do this follow the steps below.

Step 1 Run the AD Self Password Reset Configuration program

Step 2 When the Configuration program opens click the 'Add Domain' button, then enter a username and password from here add a user account that has permission to reset user passwords. Click Test to confirm a successful connection to Active Directory. Then click OK. If you receive a 'Access Denied' error message try running the Configuration program using 'Run As Administrator'.

		AD Sel	If Password	d Reset Conf	iguration (Admir	nistrator)			_

Propare latabac	P									

# 1.4 Database Encryption

On the Connection tab in the 'Database Encryption' text box enter a password that will be used to encrypt the data stored in the database then click Save. Make a note of this password somewhere secure as should you need to recover the database you will need it.

# 1.5 Database Connection

By default, the program will use the built-in SQL Compact database, should you want to use an external SQL server then enter the connection string into the 'Connection string'

text box and click Save. To prepare the external SQL database click the 'Prepare Database' button the program will then create the necessary tables.

Initial configuration is now complete; you can continue to configure the program or perform some initial tests by going to the URL where the program is installed e.g. http://server/PasswordReset.

# 2 <u>SETTINGS</u>

### 2.1 General

Unchecking options in the General section (see below) will disable these specific features from the application. For example, unchecking 'Allow users to unlock their accounts' will remove this option from users.

ŝ				AD Sel	f Password	I Reset Confi	iguration (Admir	nistrator)				x

										L		

## 2.2 Questions Group

You can specify how many questions your users will be asked during enrolment and how many questions they will need to answer to reset/change their password. You can add your own or remove the default questions.

Note the option 'Allow users to enter a custom question', this allows users to create their own question.

Number of verification questions for user enrollment:	4	
Number of answers required to reset the password:	2	
Number of answers required to unlock an account:	2	
Verification Questions: (One per line)		
What is your mother's maiden name?		^
What is your father's middle name?		
What was the name of your first school?		
Who was your childhood hero?		
what make was your first car or bike?		~
1		>

## 2.3 Choosing Questions

Pay close attention to the type of questions the users can choose, take care not to choose questions were the information is easily learned, for example asking, 'Where do you live?' could be easily learned. A more secure question to ask would be 'Where did your parents meet' as this could be a city or an event etc. Allowing the user to create their question can add security as the user may ask a question only they could ever know the answer to. The user is limited to creating just 1 question to ensure they don't create easily guessable questions.

#### 2.3 SMS

The SMS mode allows users to reset their password without the need to enroll. If the user has a mobile number stored in the 'Mobile' field in Active Directory then when the user goes to Reset their password a message is sent to their mobile containing a password reset code. The user is prompted to enter the code, if the correct code is entered the user can reset their password.

onnection 1 S	ettings SMS	Email	Expiry Notifications	Reminders	User Lockout	Password Policies	Helpdesk	Interface	Excluded Users	Capto

									Save	
-Twilio Auth	y API Key									

## Require users to enter the last 4 digits of their mobile number

When the option 'Require users to enter the last 4 digits of their mobile number' is checked users will be asked to confirm the last 4 digits of their mobile number before they can proceed.

### **Country Code**

If the users mobile number stored in Active Directory does not contain a country code then you can enter a country code here.

#### Use SMS for existing enrolled users

The option 'Use SMS for existing enrolled users' will force all enrolled users to use SMS rather than answering questions. This is ideal for customers who already have enrolled users and want to switch to SMS only. If the option is unchecked enrolled users will be asked to answer questions when they click Reset and new users who have a mobile number stored in Active Directory will use SMS. This helps if you want some users to use questions/answers (if they don't have a mobile) and you want some users to use SMS (they don't need to enroll).

## Twilio Authy API Key

To send SMS messages the program requires a Twilio Authy API Key which can be obtained from <u>https://twilio.com</u>. Twilio offer a trial to all customers who sign up, which includes a free balance for you to experiment with. Getting a Twilio API key is straight forward, simply register with Twilio, once registered locate Authy in the menu and add an 'Application', give the application a friendly name such as PasswordReset then copy the API Key from the Settings section of the Application you created and paste it into the API Key text box on the SMS tab.

### 3 <u>EMAIL</u>

The Email tab is used to configure how the program will send emails, emails are sent when a user enrolls, resets their password or their password is due to expire and also to remind users to enroll (via the admin page).

Enter the details of your mail server, the mail server, the example below is using gmail but this could be your local Exchange server or Office 365.

}			AD Sel	f Password	d Reset Confi	iguration (Admir	nistrator)

Send ema	ail to:		E	Send						

## 4.1 Expiry Notifications

On the Expiry Notifications tab you can enable or disable the password expiry notifications. When a user's password is due to expire they can be notified via email, this may prevent them from forgetting their password in the first place. When the password reminder email is sent out the user can click a link to password reset home page to change their password (email templates can be customized). You can choose how frequently to notify users of that their password will expire.

## 4.2 Reminders

Via the admin page (http://localhost/passwordreset/admin) you are can see who and who hasn't enrolled. You can also send users an email reminding them to enroll. Note the admin page can only be accessed via a URL that contains the sever name or IP address (http://localhost/.., http://sever/.., http://10.0.0.5/..).

### 4.3 User Lockout

Should a user repeatedly provide incorrect answers the program can prevent further attempts at guessing the answers by locking the user for a specified amount of time. On the User Lockout tab you specify how many failed attempts would prevent access and how soon they are allowed to try again. To prevent scripts being run to gain access use Captcha tab.

### 4.4 Password Policies

By default the program will ensure passwords being set conform to the domain password policy, you can disable this check should you need to on this tab.

To prevent users using the same password continuously you can enable the password history feature. This forces the user to choose a different password each time.

To prevent users using the same password continuously you can enable the password history feature. This forces the user to choose a different password each time.

#### 4.5 Helpdesk

You can allow a specified group of users the ability to change the password of another group of users. The feature is ideal for teachers as they can reset student's passwords so there is no need for students to enroll or call the IT department, students don't need to be enrolled for the tutor to use this feature. It can also be used by Helpdesk staff so they don't need to access Active Directory to reset passwords. To use this feature, add the name of both groups and click Add and then Save.

#### 5.1 Excluded Users

If you want to prevent selected users from using AD Self Password Reset then you can do this by adding Organization Units or groups to the Exclude tab. For example adding the organizational unit OU=Students,DC=Domain,DC=Com would prevent any users in the Students OU from using the program. Adding a group Students has the same effect.

ŝ				AD Sel	f Password	d Reset Confi	guration (Admir	nistrator)			- 🗆 X

#### 5.1.1 Captcha

CAPTCHA (Completely Automated Public Turing test to tell Computers and Humans Apart) is a challenge-response test used to determine whether or not the user is human.

To use CAPTCHA you will first need to register with Google's free reCAPTCHA service to obtain a public and private key. After registration you need to the site address where users will access AD Self Password Reset e.g. http://internal.domain.com, you will then be given a public and private key, copy these keys and paste them into the corresponding text boxes and click Save.

## 5.1.2 Enrollment

Unless SMS mode is enabled users will need to enroll before they can reset their passwords or unlock their accounts. Enrollment only takes a few minutes and involves entering their username and password to confirm the users identity and then answer a number of questions.

Which questions the user can choose from and how many they need to answer to enroll are defined by the administrator via the Configuration program (see Settings tab above).

## Step 1

Open a web browser and navigate to

http://server/PasswordReset

http://10.0.0.1/PasswordReset

To enroll a new user would click Enroll.

#### Step 3

The user needs to answer a number of questions only they will know the answer to. The default is 4 questions this can be changed via the Settings tab in the Configuration program. On the Setting tab there is an option to allow users to create their own question, the option limits the user to creating just one custom question.

Each question and answer needs to be unique, after the user has successfully selected and answered each question clicking Next will complete the enrolment. The user is then able to reset and change their password at any time.
